

Morgan Elizabeth Smith

AI and Marketing Transformation Manager

New York, NY · smith.morgan42@gmail.com · linkedin.com/in/morganelizabethsmith

PROFESSIONAL SUMMARY

Marketing strategist who gets AI from pilot to practice. Owns the AI roadmap, agent portfolio and adoption program for Accenture's 2,000 person marketing and communications function, building or co-building the tools and then running the change management that gets people using them. Partners across marketing, operations, engineering, product, design and legal. Hands-on with LLMs, prompt engineering in production and direct API integration.

KEY SKILLS

AI Systems: AI agent design and deployment · Prompt engineering in production · LLM and API integration · Workflow automation · AI tool evaluation

Marketing Operations: Workflow optimization · Intake and prioritization · Operating model redesign · Marketing technology stack · Experimentation programs

Change and Adoption: Change management at scale · Training design and delivery · Champion networks · Adoption measurement · Executive reporting

Build: Applied JavaScript, HTML and CSS · API integration · SharePoint administration · Debugging in constrained enterprise environments

TOOLS AND PLATFORMS

Generative AI: Claude (Anthropic), ChatGPT, Accenture AI Refinery, internal LLMs, Microsoft Copilot and Copilot Studio

AI Build: Anthropic API integration, prompt engineering, agent design, applied JavaScript, HTML, CSS

Analytics and Testing: Adobe Analytics, Contentsquare, Google Analytics (GA4), Adobe Target

Platform: Adobe Experience Manager, SharePoint, Figma

EDUCATION

Bachelor of Arts, Economics · Colorado College · 2018

PROFESSIONAL EXPERIENCE

AI and Marketing Transformation Manager · Accenture

June 2025 – Present

Official title: Growth and Reinvention Manager

- Own how AI gets built into marketing workflows across a 2,000 person function. Adoption follows proof, so the work starts by finding where manual effort costs real time and money and designing the tools and automation to remove it.
- Onboarded the entire marketing organization onto a new AI platform. Onboarding was the easy half. The harder work was keeping adoption from sliding back after launch, which is where most AI rollouts stall.
- Work with product and engineering to design and deploy 14 purpose-built agents. One tags digital assets to campaign IDs and now covers 65% of the library, making campaign performance traceable back to the asset that drove it.
- Decide what the marketing organization adopts. Assessed Copilot, Copilot Studio, Adobe Firefly, AI Refinery and other AI tools against how people actually work, which keeps the function from paying for tools nobody opens.
- Built and own the function's AI enablement hub, a six-page internal site serving 2,000 colleagues as the single source for AI tools, use cases, training and community. Hand-coded every module. Enablement does not stick without somewhere to send people for help.
- Designed and delivered Claude training across the function using real peer examples instead of theory. People left more confident applying it to their own work, which is the only measure that matters for training.
- Hand-coded and shipped an evaluation application, with the Anthropic API integrated for rubric-aligned scoring. Building it myself meant the program launched on schedule instead of waiting in an engineering queue.
- Founded the function's AI champion network, with members in every marketing sub-function. Champions are how a 2,000 person organization gets support without a 2,000 person support team.

Digital Strategy Associate Manager · Accenture

September 2022 – May 2025

- Owned the strategy, roadmap and backlog for Accenture.com, a global B2B enterprise site on Adobe Experience Manager. The site is where the firm's demand starts, so roadmap calls were business calls.
- Led 30 digital strategists through the rollout of a new web design system and set the standard for content design, governance and approvals. A design system only holds if the people using it understand why it exists.
- Built the intake and prioritization framework that put strategic initiatives, business as usual, enhancements and innovation into one queue with clear decision rights. Before it, the loudest stakeholder won.

- Ran delivery across designers, engineers, product managers, data scientists, content owners and web operations, which is what kept a multi-year transformation shipping across 50 countries.
- Engagement rose 24% and bounce rate fell 25% across that period, delivered by that cross-functional team.
- Built and ran the A/B and multivariate testing program on Adobe Target with our data scientists, so page decisions came from evidence instead of opinion.
- Rebuilt the Contact Us flow and the demo request paths. Visitors could reach sales directly, which turned the site into a pipeline surface instead of a brochure.

Marketing Associate Manager, promoted from Marketing Specialist • Accenture

January 2020 – September 2022

- Ran production and launch for integrated campaigns and research reports, including the global Fjord Trends program, holding content, design, agency partners and channel teams to launch dates that did not move.
- Brought in a shared workflow platform to replace the spreadsheets and email threads the team coordinated on, so campaign status lived somewhere everyone could see it. First tool rollout I owned end to end.
- Maintained the practice website and published campaign pages and client stories, so a launch went live the day the campaign did instead of a week later.
- Ran social content and channel management alongside internal communications, which kept a distributed team and an external audience working off the same launch calendar.
- Supported event planning and delivery, coordinating the logistics and content that events run on. Built client case studies with sales teams, giving them proof points to use in live deals.

Project Manager, promoted from Marketing Coordinator • Engine

July 2018 – December 2019

- Coordinated stakeholders and timelines for a global rebrand, keeping a distributed team aligned to one launch date, and supported the website modernization that came with it.
- Wrote a youth insights newsletter for 30,000+ subscribers and built the RFP and pitch library the business development team worked from.
